Pancake Alternator Replacement Kit for Generac® Generators

Alternator Kit

The Issue: The Generac OEM pancake style alternator has become difficult to obtain. Field users experienced high failure rates, low replacement part availability and long lead times for delivery. This created numerous issues with out of service equipment for customers and service providers. The 7.5 and 5.0 liter Generac-IVEC/New Holland engines have a dual v-belt set up which may require more belt tension than the pancake alternator is designed for. This causes a high fail rate on these parts. When this alternator bearing fails the case cracks which no longer allows the pulley to turn, this alternator is the tensioner for the belts, which also drives the radiator fan. Without this alternator the engine cannot operate.

The Solution: MADE IN THE USA - A custom manufactured replacement kit offered by exclusive partnership between **Clifford Power Systems & Ultimate Service Associates**.

The kit is readily available, easy to install, and available in bulk orders with special pricing*.

Contractors: Increase your profitability and client satisfaction by stocking this part; offering the availability to repair customer issues with local parts without lengthy wait times. Kits in quantities of 5 or greater, "special pricing" available.

The USA Difference:

- Easy Installation
- Reliability
- Durable Parts
- In Stock Availability

Alternator Kit:

Kit includes all materials needed (including):

- Custom-manufactured alternator brackets
- Alternator wire
- Belts, washers, nuts & bolts, & terminal connectors
