## **CLIFFORD POWER SYSTEMS RESPONDS TO THE OKLAHOMA ICE STORM**

Clifford Power Systems began 2007 educating the Tulsa community on generator safety during a segment featured on KOTV 6 during the January ice storm. We end 2007 with the same commitment to safety and service.

From providing emergency power through rentals or purchase for residential, industrial, municipalities and healthcare facilities, the experts at Clifford Power are ready to respond.

This week we served communications giant, AT&T Wireless as their central command center for disaster recovery, dispatch and traffic coordination. Arriving from Atlanta, GA, on Tuesday, December 11<sup>th</sup>, Clifford Power Systems, Inc. received and coordinated a record load of emergency generators to backup AT&T's wireless cell sites across the Tulsa metropolitan area, insuring customer communications during this critical time.

Clifford Power has also received numerous responses from our customers on the value and benefit of having a residential generator. **Read what one of our clients in the historic Maple Ridge neighborhood had to say:**

~ MORE ~

*Dear Clifford Power:*

*We purchased a 60 kW natural gas generator model 60RZG Kohler generator from you this last spring and its installation was completed this fall.*

*We live in a large, somewhat complicated old house in Maple Ridge and lost power on Dec. 10 at 1 AM when the ice knocked out power to the area. The generator came on within 3 seconds and has been fully powering our home since then (it is now Dec 12 at 3:30 AM). Though we have been without phone and cable, all other electrical functions of the house remain in good working order for 50 hours now.*

*Though the unit was expensive and the installation complicated, we genuinely appreciate the investment we made in the Kohler generator you sold us. We are not sure when power will be restored, but remain confident in the generator getting us through this ice storm and power failure. We have neighbors from the area who lost power staying with us and the unit is keeping up with the full power demands of a home with 9 people and 2 dogs.*

*We are grateful to you, BL Electric and Quest Plumbing who worked together to get our generator installed.*

*Sincerely,*

*Michael & Rosie G.*

*Tulsa, OK*
