

Spider Box Panel

Clifford Identification Numbers

SB-01	SB-02	SB-03	SB-04	SB-05
SB-05	SB-06	SB-09	SB-10	SB-12

- **Electrical Connections:**
 - Inlet will accept a 50 foot spider cable with twist lock at one end and three prong 50 amp, 240 volt plug at the other. The three prong 50 amp plug plugs into the generator outlet connections.
 - The spider box also includes a feed through receptacle to string tow spider boxes together. Clifford Power Systems, Inc. does not recommend stringing two together so we do not have or supply this cable.
 - (6) 120 volt Duplex Outlet. Each Duplex outlet is protected by its own 20 amp circuit breaker
 - (1) 240 Volt, 30 Amp Twist Lock Receptacle L6-30
- **Steel stand**
- **Stainless Rain Lip/Cover**
- **Generator must have a 50 amp rated single phase output to achieve maximum capacity of this panel. A 25 kVA unit should be used. Amperage to the panel will be limited by the 50 amp generator circuit breaker.**
